Subject: Council District 1

There are several issues surfacing in Council District 1, the completion of the Regents Road bridge, widening of Genesee Avenue and the expansion/growth in the UTC area.

Impact of the completion of Regents Road bridge over the railroad tracks and/or the widening of Genesee Avenue. There are citizens lining up on both sides of this issue. Four options exist: Build the bridge, Widen Genesee, Do Both or Do Neither. Is it possible to run an ADAM scenario comparing the response times with the bridge completed vs. without the completion? Also Laura, you provided me a map that shows the % of time an engine other than 35's responded into that area. Chief Bowman was wondering if we could get the typical response times to those areas for E35. We did something similar for the 47's area when we were arguing that situation. The other issue is where is a good location for an additional station that would improve the coverage in this area. It still looks like we need one down in the Governor Drive area, especially if the Regents Road bridge were in.

In 30 days, mid-July Chief Bowman and I will be taking Scott on a tour of the stations in his district and the associated problems with coverage. If we could get this info in 3-4 weeks it would be much appreciated. Any problems, issues or need for clarification let me know.
Thanks,
Chief Jarman
